## We're taking part in Everflow's #100Pledges campaign to become more water efficient

### Why?

To help minimise water shortages as our economy grows, and protect the environment, as there will be less demand to extract excessive amounts of water from nature.

Water usage also impacts climate change. While water is a renewable resource, greenhouse gas emissions are produced every time we use it, such as when it is treated to make it safe to drink and during the distribution process.

## Help us reach 100 pledges!

1. Choose at least one water-saving pledge
2. Write your pledge(s) on a piece of A4
3. Have someone take a photo of you holding it or take a selfie!
4. Send it to \_\_\_\_\_
5. Share on socials using this hashtag – #100Pledges

**Most importantly, stick to your pledge!**
